Education

Chandigarh University , Punjab, India Bachelor of Engineering in Computer Science	2023–2027
Aklank Public School , Kota, India CBSE (Matriculation)	2021–2022
KV 2 AFA, Hyderabad , Hyderabad, India CBSE (Intermediate)	2019–2020

Technical Skills

Languages: Java, JavaScript, SQL

Core Java: OOP, Collections Framework, Exception Handling, Multithreading, Java 8 Streams

Backend: Spring Boot, REST APIs, Redis, RabbitMQ, Node.js, Express.js

Frontend: HTML, CSS, React.js

Databases: MySQL, MongoDB, PostgreSQL, Redis

Tools: Git, GitHub, Docker, VS Code

Concepts: DSA, Problem Solving, Object-Oriented Design

Projects

High-Concurrency Flash Sale Engine

Tech: Spring Boot, Redis, PostgreSQL, RabbitMQ, Docker

- Engineered a high-concurrency flash sale backend handling 10,000+ concurrent requests in under 5 seconds (validated via Apache JMeter) with zero inventory overselling.
- Prevented race conditions using Redis caching and Redisson distributed locks for atomic inventory management.
- Designed a scalable event-driven architecture using RabbitMQ to decouple request handling from database operations.
- Achieved sub-50ms API latency and exactly-once order processing through asynchronous workflows and idempotent request handling.

Typing Speed Web App

Tech: MERN (MongoDB, Express, React, Node.js)

- Architected and developed a typing test platform with real-time WPM and accuracy computation, achieving sub-150ms response latency in local testing.
- Built 5+ RESTful APIs for session management, scoring, and user data persistence.
- Optimized React state management and rendering pipeline to minimize input lag during continuous typing sessions.
- Validated system performance under 50–100 concurrent sessions, ensuring consistent data synchronization and responsiveness.

P2P File Sharing App

Tech: React.js, WebRTC, Node.js, Express.js, WebSockets

- Built a peer-to-peer file transfer system leveraging WebRTC for direct browser-to-browser communication.
- Developed a WebSocket-based signaling server, establishing peer connections within 1–3 seconds in local testing.
- Evaluated transfer performance across multiple sessions, achieving up to 2–8 MB/s in favorable local conditions.
- Handled NAT traversal and network variability using ICE candidates and STUN servers.

Achievements

- Solved 700+ DSA problems on LeetCode with a rating of 1700 in Java.
- Achieved 1000+ rating on Codeforces through competitive programming contests.
